

Enhancing Care Delivery With Remote Patient Monitoring

Our care management services leverage remote patient monitoring technology to improve the efficacy and results of its market-leading chronic care management program. By focusing our efforts on your high-risk, high-cost populations we are able to have a significant positive impact on the financial and clinical outcomes of the patient, the practice and the healthcare system as a whole.

How it Works

One. Program Enrollment

One of our skilled nurses enrolls the patient, creates a personalized care plan, and begins consistent outreach and coaching. The patient is provided a custom welcome kit that includes any required technology, devices and instructions.

Two. Data Reporting

Patients use the device of their choice to measure the vital sign relevant to their chronic condition and care plan goal.

Three. Data Collection

Our nurses use the Wellbox HIPAA-compliant platform as well as weekly or biweekly patient outreach to monitor and discuss incoming data.

Four. Data Analysis

Centralized dashboards provide care teams easy access to long-term trends for better care management, as well as triage alerts for out-of-band readings.

Five. Revenue Management

We submit and track Medicare claims for rendered services including payment remittance, claims denials, and accounts receivables, then compensates the practice for their time at a predetermined monthly rate.

About Medical Advantage powered by Wellbox

We work with chronically ill patients and their healthcare providers to enable healthier, happier and longer lives while decreasing the financial burden of chronic illness to the healthcare system.

Our team is dedicated to making a profound, positive impact on chronic illness in America by;

- Empowering people living with chronic illnesses to be well,
- Enabling success for those caring for people with chronic illness and,
- Reducing the negative impact of chronic illness on our healthcare system.

An Out-of-the-Box Solution for Chronic Diseases

Increasing Patient Engagement with Continuous Patient Care

Our program has been custom-built with patient engagement in mind. It is easy-to-implement and easy-to-use, requiring little to no technology expertise to operate.

Fast, Direct Communication with your Care Team

A cellular enabled 2-way voice hub provides access to your care team at the touch of a button. Simply plug the device into the wall and the integrated voice capability on encrypted industry leading AT&T 4G does the rest. In addition to receiving inbound communication, nurses can develop outbound customized messages for medication, appointment and other patient reminders.

- No set-up required
- 24/7 Support from our dedicated clinical staff
- 3-day battery life upon power failure

A Device Agnostic Platform

We believe engagement begins with comfort. We give patients the choice to use their existing monitors, adopt the monitor of their choice or be provided with a monitor from the carefully vetted selection provided by our team.

The hub is paired with the monitor of choice and then relays information directly into the Medical Advantage powered by Wellbox platform. No additional technology use is required by the patient.

Easy-to-Use Centralized Dashboards

For those who enjoy tracking their progress, all data is provided in a simple web-based dashboard.

Cell-Enabled Hub

Pre-Configured Monitors

Weight Scale

Blood Pressure Cuff

Pulse Oximeter

Blood Glucose Monitor
