Medical Advantage

Care Management Services
Powered by Wellbox™

End-to-End Chronic Care Management

We are the first and only service provider to offer a true end-to-end solution for Chronic Care Management. From enrollment to revenue cycle management, our model helps minimize barriers to adoption for practices and patients alike.

As Easy As...

One. Practice Onboarding

The onboarding team works with your practice to document all processes and requirements while determining the total eligible patient panel.

Two. Patient Enrollment

A team of enrollment specialists reaches out to the eligible patient panel via letter and phone to explain the program, answer questions, and enroll patients.

Three. Care Management Program Delivery

Once enrolled, a team of highly qualified registered nurses provide monthly care management services, documented directly into your EHR.

Four. CCM Revenue Cycle Management

Wellbox submits and tracks Medicare claims for rendered CCM services including payment remittance, claims denials, and accounts receivables, then compensates the practice for their time at a predetermined monthly rate.

An Out-of-the-Box CCM Solution

Driving Financial and Clinical Results

A recent study*, conducted by Acclivity Health Solutions, showed a significant improvement in healthcare utilization and cost at a population level. Study findings include:

Improved Vaccination Compliance

More Preventative Care Visits

Decreased Urgent Facility Usage

Summary and Key Findings

Our team keeps patients engaged in their health, increasing their participation in preventative care measures which, in turn, keeps them healthier longer, improving their quality of life while decreasing the total cost of healthcare.

Patients participating with the Medical Advantage powered by Wellbox CCM program:

- Had 3x more Flu vaccinations and 2x more Pneumococcal vaccinations
- Were 2x more likely to have a preventative care visit than an emergency care visit
- Required 66% fewer hospital visits and 75% fewer nursing home visits

*In 2018, an independent study was conducted of outpatient services delivered to a panel of 1,140 patients. The study was conducted by the health economics staff of Acclivity Health Solutions and evaluated the health care services (i.e., procedures) delivered to a typical cohort of patients over a 24-month timeframe by a single primary care physician.
